

During the testing process, I identified several bugs, primarily related to validation errors. These findings highlight areas where the system's input handling and error messages could be improved. However, due to my current job obligations, I was unable to document all detected issues in detail.

To demonstrate my ability to report defects effectively, I have documented one bug report as an example. This report showcases my skills in identifying, describing, and structuring bug reports in a professional manner. While I have not covered every issue in detail, the provided example reflects my approach to defect tracking and reporting.

### **BUG UI – Add new Contact - System Allows Setting a Future Date as Birth Date**

**Priority: 3**

**Severity: 3 - Medium**

#### **Report Steps**

#### **Preconditions:**

- The user is logged in

#### **Steps to Reproduce:**

- On the Contact List page, click on the Add a New Contact button.
- Fill the First Name and Last Name input fields.
- Fill the Date of Birth input field with the value “**2050-12-10**”
- Click on the Submit button.

#### **Expected Result:**

The system should **not allow** users to set a birth date in the future

#### **Actual Result:**

The system **allows** users to enter a birth date in the future. No validation error message is displayed.
